Dairy-Herd-Improvement-Association Letter

(Vol. 31, No. 3)

March 1955

ARTIFICIAL-BREEDING ORGANIZATIONS IN THE UNITED STATES
ACTIVE JANUARY 1, 1955

(As reported by State Extension Dairymen)

On January 1, 1955, there were 593,190 herds enrolled in 79 artificial-breeding organizations. During the year 1954, 5,155,240 cows were bred artificially. Compared with the previous year, these figures represent a decrease of 13,807, or 2.3 percent, in number of herds enrolled and an increase of 310,018, or 6.4 percent, in number of cows bred.

Wisconsin again leads the States in number of cows bred in artificial-breeding organizations, with 974,414 cows bred in 1954. States in which 40,000 or more cows were bred in artificial-breeding organizations in 1954 are as follows:

Wisconsin	-----974,414	Idaho	-----74,525
Minnesota	-----453,099	Vermont	-----72,919
Pennsylvania	-----408,922	Kentucky	-----65,518
Ohio	-----324,445	Kansas	-----62,359
Iowa	-----303,164	New Jersey	-----60,858
Illinois	-----273,955	Maryland	-----52,979
California	-----226,517	Tennessee	-----51,475
Michigan	-----210,598	Maine	-----48,609
Indiana	-----186,930	Nebraska	-----47,621
Missouri	-----129,103	North Carolina	-----45,505
Washington	-----119,931	Connecticut	-----43,968
Massachusetts	-----79,127	Virginia	-----42,160

On the following pages are data showing the status of artificial-breeding organizations for the various States.

DHIA PROVED-SIRE RECORDS TABULATED IN FEBRUARY 1955

Following is a list of 658 sires whose records were tabulated or retabulated by the Dairy Husbandry Research Branch in February 1955. Production records used in proving DHIA sires consist of 305-day lactation records standardized to a mature equivalent twice-a-day milking basis.

An asterisk at the end of a sire's registration number indicates a retabulated record. The asterisk may be followed by any number from 1 through 15 (i. e., *12) to indicate in which of the 15 printed lists his previous record appeared. Or the asterisk may be followed by the month and year (i. e., *May 51) of the DHIA letter in which his previous record appeared. Two asterisks following the sire's registration number, or following reference to a previous listing, indicate that the proved-sire tabulation or retabulation was requested by one of the States.

In case records from more than one herd were used, the reference is to the herd from which production records for the largest number of the sire's youngest daughters were reported. If the sire has been used in an artificial-breeding association, the name of the association is given.

Proved-sire records consisting of fewer than 10 comparisons are indicated as "preliminary" because these records may be significantly changed when additional comparisons become available and are included in the proved-sire records.

To make the most intelligent selection of a sire, the dairyman should use these proved-sire records to single out the most promising sire and then make every effort to supplement these data with additional information gathered from the herds in which the dams and daughters made their records. Particular attention should be given to the feeding practices and environmental conditions under which the records were made, in order to be assured that the records of the daughters were not made under more favorable conditions than those of the dams or vice versa. It is especially important to determine that there has been no selection of daughters in making the comparison.
